

# Google Play Store App Insights Dashboard – Solution Guide (Looker Studios)

## Basic Level Questions

---

**Question 1: What is the average rating of apps in the dataset?**

**Answer:** The average rating of apps in the dataset is approximately **4.17**.

**Business Insight:** Most apps have positive user feedback, indicating a generally high level of user satisfaction.

---

**Question 2: Which category has the highest number of apps?**

**Answer:** The **Family** category has the highest number of apps.

**Business Insight:** The Family category is highly competitive and offers diverse content for users of all age groups.

---

**Question 3: How many apps are free vs paid?**

**Answer:**

- Free Apps: **7,590**
- Paid Apps: **604**

**Business Insight:** Free apps dominate the Google Play Store ecosystem, representing more than 90% of all apps.

---

**Question 4: What is the maximum rating achieved by any app?**

**Answer:** The maximum rating is **5.0**.

**Business Insight:** Several applications have achieved perfect ratings, indicating excellent user satisfaction.

---

### **Question 5: What is the minimum rating achieved by any app?**

**Answer:** The minimum rating is **1.0**.

**Business Insight:** A small number of apps have poor user experiences, resulting in very low ratings.

---

### **Question 6: What is the total number of installs across all apps?**

**Answer:** Total installs exceed **75 Billion**.

**Business Insight:** The Google Play Store serves a massive global user base.

---

### **Question 7: Which content rating category contains the most apps?**

**Answer:** **Everyone** contains the highest number of apps.

**Business Insight:** Developers generally target broad audiences to maximize reach.

---

### **Question 8: What is the average app size?**

**Answer:** Average app size is approximately **21.76 MB**.

**Business Insight:** Most applications are relatively lightweight and mobile-friendly.

---

### **Question 9: What is the maximum app size?**

**Answer:** Maximum app size is **100 MB**.

**Business Insight:** Some applications require large resources due to multimedia and advanced functionality.

---

### **Question 10: Which year had the highest number of app updates?**

**Answer:** **2018** recorded the highest number of app updates.

**Business Insight:** Developers increasingly focused on app maintenance and feature improvements.

---

## Medium Level Questions

---

**Question 1: Which categories have the highest average ratings?**

**Answer:** Categories such as **Events, Education, and Art & Design** have the highest average ratings.

**Business Insight:** Specialized categories often provide highly focused user experiences.

---

**Question 2: Which category has the highest number of installs?**

**Answer:** Categories such as **Game, Communication, and Social** contribute the highest install counts.

**Business Insight:** Entertainment and communication apps drive user engagement.

---

**Question 3: What is the relationship between ratings and reviews?**

**Answer:** Apps with more reviews generally maintain strong ratings.

**Business Insight:** Popular apps often continue to satisfy users even at scale.

---

**Question 4: Which categories contain the highest number of paid apps?**

**Answer:** **Family, Game, and Personalization** categories contain the highest number of paid applications.

**Business Insight:** Users are willing to pay for premium experiences in these categories.

---

### **Question 5: How are apps distributed across rating groups?**

**Answer:** Most applications fall within the **4–5 rating range**.

**Business Insight:** The majority of applications deliver acceptable user experiences.

---

### **Question 6: What is the distribution of app prices?**

**Answer:** Most paid apps are concentrated within lower price ranges.

**Business Insight:** Affordable pricing strategies are more common among developers.

---

### **Question 7: Does app size impact ratings?**

**Answer:** No strong relationship is observed between app size and ratings.

**Business Insight:** Users value functionality and experience more than application size.

---

### **Question 8: Does app size affect installs?**

**Answer:** App size has minimal influence on install counts.

**Business Insight:** Popularity depends more on usefulness and quality.

---

### **Question 9: Which categories contain the largest applications?**

**Answer:** **Entertainment** and **Education** categories have the largest average app sizes.

**Business Insight:** Multimedia content increases application size requirements.

---

### **Question 10: Which Android versions are most commonly supported?**

**Answer:** Most applications support modern Android versions, particularly **Android 4.1 and above**.

**Business Insight:** Developers prioritize compatibility with actively used Android devices.

---

# Advanced Level Questions

---

## Question 1: Does higher pricing result in higher ratings?

**Answer:** No significant relationship exists between app price and rating.

**Business Insight:** User satisfaction is influenced more by quality than pricing.

**Conclusion:** Higher prices do not guarantee better ratings.

---

## Question 2: Does higher pricing result in more reviews?

**Answer:** Higher-priced applications generally receive fewer reviews compared to free apps.

**Business Insight:** Free applications attract larger audiences and therefore more engagement.

**Conclusion:** Pricing can reduce user adoption and review volume.

---

## Question 3: Is there a relationship between installs and ratings?

**Answer:** Popular apps generally maintain strong ratings.

**Business Insight:** Successful apps combine quality and widespread adoption.

**Conclusion:** Higher installs often correlate with positive user experiences.

---

## Question 4: What factors contribute most to app success?

**Answer:** Key factors include:

- High ratings
- Frequent updates
- Strong user engagement
- Broad audience targeting
- Effective category positioning

**Business Insight:** App success is determined by multiple factors rather than a single metric.

---

## **Question 5: What strategic recommendations can be provided to developers?**

### **Answer:**

1. Focus on maintaining ratings above 4.0.
2. Release updates regularly.
3. Optimize application size.
4. Target high-demand categories.
5. Adopt a freemium business model.
6. Support multiple Android versions.
7. Improve user experience through feedback.

**Conclusion:** Continuous improvement, user satisfaction, and market-focused strategies are the most effective ways to achieve long-term success on the Google Play Store.
